Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering)

Enrico Drioli, Gianluca Di Profio, Efrem Curcio

This book covers all the basic and applied aspects of crystallization processes based on membrane technology. Synthesis and processing of membrane materials are discussed and reviewed, while mass/heat transport and control are treated in view of the non-reversible thermodynamic principles and statistical thermodynamics. Engineering process design and crystalline materials products properties, and also the relation to other traditional crystallization formats, are analyzed. Advantages, limitations, and future developments are also included in the content, with special emphasis on new fields of applications like microfluidic configurations, controlled proteins (also membrane proteins) crystallization, organic semiconductors single crystals production, and optical materials.

Readership: Undergraduates, graduates, researchers, and professionals studying/dealing with physical chemistry, chemical engineering, materials chemistry/nanochemistry, liquid crystals & crystallography, surface science, and general material science.

From reader reviews:

Lonnie Bowers:

Hey guys, do you desire to find a new book to learn? Maybe the book with the concept Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering) suitable to you? The particular book was written by renowned writer in this era. The book entitled Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering) is a single of several books which everyone read now. This particular book was inspired lots of people in the world. When you read this publication you will enter the new dimension that you ever know prior to. The author explained their idea in the simple way, consequently all of people can easily be aware of the core of this guide. This book will give you a wide range of information about this world now. So that you can see the represented of the world on this book.

Alex Levey:

Spent a free time for you to be fun activity to try and do! A lot of people spent their spare time with their family, or their friends. Usually they doing activity like watching television, planning to beach, or picnic in the park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Maybe reading a book might be option to fill your totally free time/ holiday. The first thing that you ask may be what kinds of guide that you should read. If you want to consider look for book, maybe the book entitled Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering) can be excellent book to read. Maybe it is usually best activity to you.

John Glass:

Are you kind of hectic person, only have 10 or 15 minute in your morning to upgrading your mind expertise or thinking skill even analytical thinking? Then you are receiving problem with the book in comparison with can satisfy your short time to read it because all this time you only find reserve that need more time to be read. Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering) can be your answer because it can be read by you actually who have those short extra time problems.

Anna Hart:

Do you like reading a book? Confuse to looking for your favorite book? Or your book was rare? Why so many question for the book? But almost any people feel that they enjoy with regard to reading. Some people likes looking at, not only science book but novel and Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering) as well as others sources were given knowledge for you. After you know how the fantastic a book, you feel need to read more and more. Science reserve was created for teacher as well as students especially. Those guides are helping them to include their knowledge. In other case, beside science reserve, any other book likes Membrane-Assisted Crystallization Technology (Advances in Chemical and Process Engineering) to make your spare time a lot more colorful. Many types of book like

here.
