Mobile Robot Localization and Map Building: A Multisensor Fusion Approach

Jose A. Castellanos, Juan D. Tardós

Mobile Robot Localization and Map Building: A Multisensor Fusion Approach Jose A. Castellanos, Juan D. Tardós

During the last decade, many researchers have dedicated their efforts to constructing revolutionary machines and to providing them with forms of artificial intelligence to perform some of the most hazardous, risky or monotonous tasks historically assigned to human beings. Among those machines, mobile robots are undoubtedly at the cutting edge of current research directions. A rough classification of mobile robots can be considered: on the one hand, mobile robots oriented to human-made indoor environments; on the other hand, mobile robots oriented to unstructured outdoor environments, which could include flying oriented robots, space-oriented robots and underwater robots. The most common motion mechanism for surface mobile robots is the wheel-based mechanism, adapted both to flat surfaces, found in human-made environments, and to rough terrain, found in outdoor environments. However, some researchers have reported successful developments with leg-based mobile robots capable of climbing up stairs, although they require further investigation. The research work presented here focuses on wheel-based mobile robots that navigate in human-made indoor environments.

The main problems described throughout this book are:

- Representation and integration of uncertain geometric information by means of the Symmetries and Perturbations Model (SPmodel). This model combines the use of probability theory to represent the imprecision in the location of a geometric element, and the theory of symmetries to represent the partiality due to characteristics of each type of geometric element.
- A solution to the first location problem, that is, the computation of an estimation for the mobile robot location when the vehicle is completely lost in the environment. The problem is formulated as a search in an interpretation tree using efficient matching algorithms and geometric constraints to reduce the size of the solution space.
- The book proposes a new probabilistic framework adapted to the problem of simultaneous localization and map building for mobile robots: the Symmetries and Perturbations Map (SPmap). This framework has been experimentally validated by a complete experiment which profited from ground-truth to accurately validate the precision and the appropriateness of the approach.

The book emphasizes the generality of the solutions proposed to the different problems and their independence with respect to the exteroceptive sensors mounted on the mobile robot. Theoretical results are complemented by real experiments, where the use of multisensor-based approaches is highlighted.

From reader reviews:

Carmela Williams:

Why don't make it to become your habit? Right now, try to ready your time to do the important act, like looking for your favorite publication and reading a e-book. Beside you can solve your trouble; you can add your knowledge by the book entitled Mobile Robot Localization and Map Building: A Multisensor Fusion Approach. Try to make the book Mobile Robot Localization and Map Building: A Multisensor Fusion Approach as your pal. It means that it can to be your friend when you feel alone and beside regarding course make you smarter than ever. Yeah, it is very fortunated for you personally. The book makes you a lot more confidence because you can know anything by the book. So , we should make new experience along with knowledge with this book.

Joseph Yancey:

The book Mobile Robot Localization and Map Building: A Multisensor Fusion Approach make one feel enjoy for your spare time. You need to use to make your capable far more increase. Book can being your best friend when you getting tension or having big problem together with your subject. If you can make looking at a book Mobile Robot Localization and Map Building: A Multisensor Fusion Approach to get your habit, you can get much more advantages, like add your capable, increase your knowledge about a few or all subjects. You are able to know everything if you like available and read a e-book Mobile Robot Localization and Map Building: A Multisensor Fusion Approach. Kinds of book are several. It means that, science guide or encyclopedia or other folks. So , how do you think about this e-book?

Joyce Hynes:

Hey guys, do you wishes to finds a new book to learn? May be the book with the subject Mobile Robot Localization and Map Building: A Multisensor Fusion Approach suitable to you? The particular book was written by renowned writer in this era. The actual book untitled Mobile Robot Localization and Map Building: A Multisensor Fusion Approachis one of several books this everyone read now. This specific book was inspired many people in the world. When you read this reserve you will enter the new dimension that you ever know just before. The author explained their idea in the simple way, thus all of people can easily to recognise the core of this reserve. This book will give you a wide range of information about this world now. So that you can see the represented of the world within this book.

Susan Arnold:

This Mobile Robot Localization and Map Building: A Multisensor Fusion Approach is great publication for you because the content and that is full of information for you who have always deal with world and get to make decision every minute. This book reveal it information accurately using great arrange word or we can claim no rambling sentences included. So if you are read the item hurriedly you can have whole data in it. Doesn't mean it only provides straight forward sentences but tricky core information with lovely delivering

sentences. Having Mobile Robot Localization and Map Building: A Multisensor Fusion Approach in your hand like finding the world in your arm, information in it is not ridiculous 1. We can say that no reserve that offer you world in ten or fifteen second right but this book already do that. So , this can be good reading book. Hello Mr. and Mrs. stressful do you still doubt this?
