Vector Quantization and Signal Compression (The Springer International Series in Engineering and Computer Science)

Allen Gersho, Robert M. Gray

Vector Quantization and Signal Compression (The Springer International Series in Engineering and Computer Science) Allen Gersho, Robert M. Gray

Herb Caen, a popular columnist for the San Francisco Chronicle, recently quoted a Voice of America press release as saying that it was reorganizing in order to "eliminate duplication and redundancy. " This quote both states a goal of data compression and illustrates its common need: the removal of duplication (or redundancy) can provide a more efficient representation of data and the quoted phrase is itself a candidate for such surgery. Not only can the number of words in the quote be reduced without losing information, but the statement would actually be enhanced by such compression since it will no longer exemplify the wrong that the policy is supposed to correct. Here compression can streamline the phrase and minimize the embarrassment while improving the English style. Compression in general is intended to provide efficient representations of data while preserving the essential information contained in the data. This book is devoted to the theory and practice of signal compression, i. e. , data compression applied to signals such as speech, audio, images, and video signals (excluding other data types such as financial data or general purpose computer data). The emphasis is on the conversion of analog waveforms into efficient digital representations and on the compression of digital information into the fewest possible bits. Both operations should yield the highest possible reconstruction fidelity subject to constraints on the bit rate and implementation complexity.

From reader reviews:

Brenda Carey:

People live in this new time of lifestyle always attempt to and must have the free time or they will get wide range of stress from both day to day life and work. So , when we ask do people have time, we will say absolutely of course. People is human not only a robot. Then we question again, what kind of activity do you have when the spare time coming to a person of course your answer will unlimited right. Then do you ever try this one, reading textbooks. It can be your alternative in spending your spare time, the book you have read will be Vector Quantization and Signal Compression (The Springer International Series in Engineering and Computer Science).

Lawrence Woods:

In this era globalization it is important to someone to receive information. The information will make you to definitely understand the condition of the world. The condition of the world makes the information much easier to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can see that now, a lot of publisher that will print many kinds of book. The book that recommended to you personally is Vector Quantization and Signal Compression (The Springer International Series in Engineering and Computer Science) this e-book consist a lot of the information with the condition of this world now. This book was represented how can the world has grown up. The vocabulary styles that writer make usage of to explain it is easy to understand. The actual writer made some analysis when he makes this book. Honestly, that is why this book suited all of you.

Duane Zook:

In this era which is the greater man or woman or who has ability in doing something more are more special than other. Do you want to become one of it? It is just simple approach to have that. What you should do is just spending your time not very much but quite enough to enjoy a look at some books. Among the books in the top list in your reading list is definitely Vector Quantization and Signal Compression (The Springer International Series in Engineering and Computer Science). This book that is qualified as The Hungry Slopes can get you closer in getting precious person. By looking right up and review this publication you can get many advantages.

Elbert Lupton:

As we know that book is very important thing to add our expertise for everything. By a publication we can know everything we wish. A book is a range of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This publication Vector Quantization and Signal Compression (The Springer International Series in Engineering and Computer Science) was filled in relation to science. Spend your extra time to add your knowledge about your scientific disciplines competence. Some people has several feel when they reading some sort of book. If you know how big good thing about a book, you can sense enjoy to read a

book. In the modern era like now, many ways to get book that you simply wanted.
