ORENCIA (Abatacept): Treats Moderate to Severe Rheumatoid Arthritis (RA) in Adults and Moderate to Severe Juvenile Idiopathic Arthritis in Children 6 Years of Age or Older James Lee Anderson

“Although, your health condition may impact your everyday life, do not let it define who you are.”

ORENCIA (abatacept) is used alone or in combination with other medications to reduce the pain, swelling, difficulty with daily activities, and joint damage caused by rheumatoid arthritis (a condition in which the body attacks its own joints causing pain, swelling, and loss of function) in patients who have not been helped by other medications. ORENCIA is also used in children 6 years of age and older for juvenile idiopathic arthritis (JIA). Abatacept is in a class of medications called selective costimulation modulators (immunomodulators). It works by blocking the activity of T-cells, a type of immune cell in the body that causes swelling and joint damage in people who have arthritis. This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—ORENCIA. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
