Without doubt, if you are like me... the first question that will definitely come to mind when confronted with the term 'Psoriasis' is to first ask 'What Psoriasis is?'

Well, to put it a simple way, Psoriasis is a skin condition whereby the skin is sore and swollen but it is totally not transmissible or contagious.

That notwithstanding, Psoriasis is, however, suffered by several persons world over as if it were contagious. In fact, the third world or what we call the developing countries in particular has reported cases that are notably identical.

Well, in actual sense, there are cases of severe psoriasis that has been reported by advance countries like the United States of America as well, however, the population of affected people is between 2 to 3 percent while Australia has 2 percent of her population suffering from this condition.

Besides the 2-3 percent reported in the United States of America, some report shows that some 20 percent of the population in the United States of America might be suffering from mild psoriasis cases.

However, I must warn here that you need to watch it as mild psoriasis can become severe if not given the necessary attention over time.

Besides that, another report confirms that about 150,000 new cases of psoriasis are reported every single year in the United States of America alone!

Now, what this means is that if psoriasis is rampant in other countries compared with the United States of America, then this condition should not be looked down upon as nothing. It should indeed be a source of concern.

Anyway, the good news about all this is that psoriasis is not a terminal disease. Nevertheless, it predisposes its sufferers to heart attack and makes the sufferers along with their families to be highly despondent.

Well, besides the above news, we shall be looking at the different ways of treating this condition in this book... and doing so we will particularly be discussing from both the natural and medical ways of handling psoriasis.
