This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: ...to travel on, and at the end of the frame is a strong roller press. The plates can easily be run forward to the press, and the card punched by running them under the roller; it may then be taken out, and as many impressions from the plate cut as are required. When finished, the stamping plate is taken back to the punch box and placed against it as before; then, with a comb, or block of wood, set Fig. 95 with pins, all the needles are pushed out of the plate into the punch box. Another card can be brought before the needles, and the plate filled as before. This machine is very useful for copying damaged cards, even when a repeater as those about to be described is at hand. A damaged card can be held between the needles and punches, and the plate filled, same as when copying a set. Figs. 95, 97, and 98 show the principle of working three of the best-known repeating machines, which will copy a set of cards at the rate of from 40 to 60 per minute. Fig. 95 shows the arrangement of the punches in Nuttall's patent repeater. The punches are shown at A, and the stoppers or keys at B; the cards to be punched pass in between the blocks c and D. B1 shows the shape of one of the stoppers which, when over a punch, locks it, and causes a hole to be cut in the card. The stoppers all stand over the punches when at rest; the cards to be copied are hung on a cylinder, and act on a set of horizontal needles, g (Fig. 96); these needles have upright wires, m, n, passing through eyes in them, and also through eyes in the stoppers b. The upright wires act as levers, working on centres, m; and when one of the horizontal needles g is pushed back by the card to be copied, the corresponding stopper b is drawn from above the punch a, which allows it to rise when the card to be cut is r...
