Introduction to Machine Learning (Adaptive Computation and Machine Learning series) Ethem Alpaydin

The goal of machine learning is to program computers to use example data or past experience to solve a given problem. Many successful applications of machine learning exist already, including systems that analyze past sales data to predict customer behavior, optimize robot behavior so that a task can be completed using minimum resources, and extract knowledge from bioinformatics data. The second edition of *Introduction to Machine Learning* is a comprehensive textbook on the subject, covering a broad array of topics not usually included in introductory machine learning texts. In order to present a unified treatment of machine learning problems and solutions, it discusses many methods from different fields, including statistics, pattern recognition, neural networks, artificial intelligence, signal processing, control, and data mining. All learning algorithms are explained so that the student can easily move from the equations in the book to a computer program. The text covers such topics as supervised learning, Bayesian decision theory, parametric methods, multivariate methods, multilayer perceptrons, local models, hidden Markov models, assessing and comparing classification algorithms, and reinforcement learning. New to the second edition are chapters on kernel machines, graphical models, and Bayesian estimation; expanded coverage of statistical tests in a chapter on design and analysis of machine learning experiments; case studies available on the Web (with downloadable results for instructors); and many additional exercises. All chapters have been revised and updated. *Introduction to Machine Learning* can be used by advanced undergraduates and graduate students who have completed courses in computer programming, probability, calculus, and linear algebra. It will also be of interest to engineers in the field who are concerned with the application of machine learning methods.

From reader reviews:

Howard Depriest:

Book will be written, printed, or illustrated for everything. You can learn everything you want by a reserve. Book has a different type. To be sure that book is important thing to bring us around the world. Adjacent to that you can your reading ability was fluently. A guide Introduction to Machine Learning (Adaptive Computation and Machine Learning series) will make you to always be smarter. You can feel far more confidence if you can know about every little thing. But some of you think that will open or reading a new book make you bored. It isn't make you fun. Why they could be thought like that? Have you searching for best book or appropriate book with you?

Cary Barrett:

A lot of people always spent their own free time to vacation as well as go to the outside with them household or their friend. Do you know? Many a lot of people spent they free time just watching TV, or maybe playing video games all day long. If you would like try to find a new activity this is look different you can read the book. It is really fun in your case. If you enjoy the book which you read you can spent the whole day to reading a reserve. The book Introduction to Machine Learning (Adaptive Computation and Machine Learning series) it is rather good to read. There are a lot of folks that recommended this book. These were enjoying reading this book. When you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore simply to read this book from a smart phone. The price is not to fund but this book has high quality.

Ora Barbour:

The reason why? Because this Introduction to Machine Learning (Adaptive Computation and Machine Learning series) is an unordinary book that the inside of the guide waiting for you to snap the item but latter it will distress you with the secret it inside. Reading this book adjacent to it was fantastic author who all write the book in such remarkable way makes the content on the inside easier to understand, entertaining technique but still convey the meaning totally. So , it is good for you because of not hesitating having this any more or you going to regret it. This unique book will give you a lot of advantages than the other book possess such as help improving your proficiency and your critical thinking means. So , still want to delay having that book? If I had been you I will go to the reserve store hurriedly.

Donald Lester:

Many people spending their time by playing outside using friends, fun activity together with family or just watching TV the entire day. You can have new activity to spend your whole day by examining a book. Ugh, do you think reading a book will surely hard because you have to bring the book everywhere? It alright you can have the e-book, having everywhere you want in your Smart phone. Like Introduction to Machine Learning (Adaptive Computation and Machine Learning series) which is getting the e-book version. So , try

out this book? Let's see.
